

The INCREDIBLE JOURNEY :

The WATER CYCLE is learned by students as they travel as a water drop through the different locations that water may occupy. Students learn about the value of water on earth, and how the water cycle works by moving throughout nine different stations. This is a great activity for a large group of 15-35 students. Best if done outdoors, or in a large open indoor area. (Grades K-6, 30minutes to 1 hr.)
